

New York University Tandon School of Engineering
Computer Science and Engineering
CS-UY 2214, Computer Architecture and Organization
4 Credits
Syllabus – Fall 2025

Ratan Dey

1 Basic information

1.1 Course description

The purpose of the course is to introduce and discuss the structure and operation of digital computers. Topics will include the logic of circuits, microarchitectures, microprogramming, conventional machine architectures, and an introduction to software/hardware interface issues. Assembly language and hardware design programming will be used to demonstrate some of the basic concepts.

1.2 Course Objectives

By successfully finishing this course, students will be able to:

- Gain understanding of Binary Arithmetics, Logic Gates, Bitwise Operations, Cycles and Timing.
- Design Adders, ALUs using Logic Gates and represent these using Verilog (Hardware Description Language).
- Gain understanding of Registers, Register Files, Counter, Memory and represent these using Sequential Verilog.
- Develop ability to design and implement a moderately complex 12-bit and 16-bit Processor.
- Learn to use 3 different variations of Instructions Set Architectures (ISA)/Assembly Languages and solve different problems using Assembly Languages.
- Understand how Pipelining, Caching, Virtual Memory, Parallel Architectures work.
- Gain understanding of Intel x86 (32-bit) hardware, x86 Register Models, and x86 Instructions Set Architectures (ISA).
- Gain understanding of Linux System Calls, interrupts, Input/Output.
- Gain understanding of GPU and differences between CPU and GPU.

1.3 Logistics

Meeting times are as follows:

Section	Time	Place	Instructor
ALEC	10:00 AM - 11:50 AM TuTh	6 MetroTech Center Room No 475	Dey
BLEC	4:00 PM - 05:50 PM Tu Th	2 MetroTech Center Room No 911	Dey
REC1	8:00 AM - 9:50 AM F	6 MetroTech Center Room No 777	Xie, Xu
REC2	10:00 AM - 11:50 AM F	2 MetroTech Center Room No 811	Aronov, Kang
REC3	12:00 PM - 1:50 PM F	2 MetroTech Center Room No 811	Aronov, Yuan
REC4	12:00 PM - 1:50 PM F	6 MetroTech Center Room No 301	Xiong, Hoang
REC5	2:00 PM - 3:50 PM F	6 MetroTech Center Room No 205	Shah, Yuan
REC6	2:00 PM - 3:50 PM F	6 MetroTech Center Room No 200	Suha, Kim

Please attend only the lecture and recitation that you are registered for.

1.4 Contact

The best way to get in touch with your professor is by email. You are encouraged to contact me with any question, at any time.

Name	email	Student hours
Ratan Dey	ratan@nyu.edu	by appointment

Our course assistants are:

Name	email	Student hours
Uma Nachiappan	un2021@nyu.edu	11:00 AM - 12:00 PM M W
Joe Aronov	ja4541@nyu.edu	11:00 AM - 12:00 PM Sat Sun
James Xie	hx2227@nyu.edu	01:00 AM - 02:00 PM M W
Ananya Shah	acs9931@nyu.edu	04:30 PM - 05:30 PM M W
Hanming Xiong	hx2222@nyu.edu	01:00 PM - 02:00 PM Tu Th
Suha Hoque	sh6942@nyu.edu	02:00 PM - 03:00 PM M
Celine Hoang	hh3009@nyu.edu	09:00 AM - 10:00 AM W
Runbin Yuan	ry2361@nyu.edu	08:00 PM - 09:00 PM Th
Eileen Xu	elx204@nyu.edu	07:00 PM - 08:00 PM Tu
Brandon Kim	bmk7319@nyu.edu	07:00 PM - 08:00 PM Th
Edward Kang	emk9058@nyu.edu	02:00 PM - 03:00 PM W

When contacting a member of the teaching staff by email, please must use the course code (“CS-UY 2214”) in the subject, so that we know the context.

Please do not send source code as an email attachment, as it will most likely be blocked by NYU security filters.

1.5 Prerequisites

To enroll in this course, you must have passed CS-UY 2134 and CS-UY 2124, or CS-UY 2204, or equivalent courses. Prerequisite courses must be passed with a grade of C- or better. Students should be comfortable reading, writing, and debugging programs in an imperative programming language, such as C++ or Python.

1.6 Textbook

This textbook is optional. It may provide useful background information but is not required for this course. It is Computer Organization and Design: The Hardware/Software Interface, D. A. Patterson and J. L. Hennessy, 5th edition, Morgan Kaufman, 2014. ISBN : 978-0-12-407726-3

1.7 Topics

A tentative list of topics to be covered this semester:

- Binary arithmetic
- Adders and ALUs
- Verilog
- Cycles and timing
- E15 instruction set
- Functions, stack, recursion
- Pipelining
- Caching
- Virtual memory
- Parallel architectures
- Intel x86 instruction set
- Linux system calls
- GPU and differences between GPU and CPU

2 Coursework

2.1 Grading rubric

Your final numeric grade for this class will be calculated as follows:

- Lecture participation: 5%
- Recitations: 10%
- Midterm Exam 25%
- Final exam: 35%
- Homework: 12.5%
- Projects: 12.5%

Your final numeric grade will be converted into a letter grade based on the standard cutoffs.

2.2 Learning Time Rubrics

Learning Time Element	Time on Task for Students (weekly estimates)	Notes
Weekly Lectures	3 hours 40 minutes (2 X 1 hour 50 min)	Lectures (each week) will be held in person
Recitations (Lab)	1 hours 50 minutes	Recitations will be held in person
Homework	4-8 hours	There will be an assignment every week
Project	7-12 Hours per project	There will be two projects
Reading	3-5 hours	Reading slides, guides, manuals and other background material

2.3 Assignments

Assignments will be distributed on NYU Brightspace and should be submitted on Gradescope. Only work submitted on Gradescope will be accepted.

- Homework — Credit is given for finding correct solutions to the problems posed in the homework assignment. Partial credit may be given for partially correct solutions. The cumulative homework represents a significant component of your final grade, and therefore students should complete the work carefully. You are encouraged to start the homework early, as it may be more time-consuming than you expect. Your submitted homework must represent purely your own work: collaboration is strictly prohibited.

The lowest homework grade will be dropped.

- Recitation work — Credit is given for a reasonable good-faith effort to complete the work. While working on the recitation assignments, you are encouraged to consult with teaching staff and to collaborate with other students. The focus of recitation work is to practice the material, not to demonstrate mastery. All recitation work should be done during recitation sections. In order to get credit for recitation work, you must (a) be present during recitation, (b) submit your work promptly, and (c) request a check from your recitation leader during recitation.
- Projects — These are larger programming assignments that require a deeper understanding of course material and more time to complete. They are accordingly each given more weight than homework. Your submitted projects must represent purely your own work: collaboration is strictly prohibited.

After each assignment, a certain number of students will be randomly selected for a follow-up interview. You will have the opportunity to answer more in-depth questions about your submission with a member of the teaching staff.

2.4 Participation

Lectures are not intended to be an exercise in passive listening. Students should be engaged with the material, prepared to ask questions, and ready to respond to learning activities. With active learning, you'll feel more engaged, you'll remember the material better, and you'll be able to shape the direction of the discussion.

To help motivate student engagement, we'll be using a student response system (SRS), Poll Everywhere. This tool allows the instructor to present polls to students during lecture, giving each student a chance to respond. Students can respond via their computer or smart phone. Responses to the poll can then form the basis of in-class discussions.

Participation with SRS contributes to your grade. In-class polls will typically be evaluated on the basis of good-faith effort: that is, if you demonstrate a sincere attempt to answer correctly, you will get credit, even if your answer is wrong. Some polls may be evaluated as "pop quizzes," i.e. your credit depends on getting the right answer, in which case you will be notified in advance.

2.5 Getting help

This is a challenging class. If you are struggling with the material, it is your responsibility to take action to improve your understanding. There are a variety of ways to get help:

- Review the slides. Although the slides are not a substitute for the lecture, they may provide clarifying details.
- Ask questions in class. A classroom discussion is the most direct way to understand the material thoroughly. You can ask questions during lecture or during recitation.
- Meet with a CA. The course assistants offer regular office hours, and can meet with you one-on-one or in small groups.

- Meet with the professor. The professor has regular office hours, as well as office hours by appointment.
- Send an email. You can contact your professor or a CA by email to ask questions about the homework or course material.
- Read the book. You may prefer the presentation of material in a textual format.

In case of any doubts, please discuss the situation with your professor. Your professor may be able to help you recover from bad grades if you take action in a timely manner.

3 Tools

3.1 Gradescope

We use Gradescope to submit assignments. You should receive an automatic email notifying you of your registration on Gradescope. If you don't already have an account, please create your Gradescope account according to the following guidelines:

- For your *name*, please give the customary name you use to mark your work. Give both first and last name.
- For your *student ID*, give your NYU NetID. Your NetID is the identifier based on your initials, followed by a number, such as **ab123**.
- For your *email address*, give your NYU email address. This is normally the address based on your NetID (for example, **ab123@nyu.edu**).

You may re-submit your work on Gradescope as many times as you like until the deadline. Submit early to ensure you don't miss the deadline. After the deadline, you will not be able to re-submit. Once you've submitted, please verify that you uploaded the correct file, as only those files that you've uploaded will be graded: it is your responsibility to check that the uploaded materials correspond to the work that you want evaluated.

Do not upload zip files or other compressed files. If you are using a Mac, please be aware that the operating system creates invisible files named `__MACOSX` and `.DS_Store`; please do not upload these files to Gradescope: uploading them makes grading more difficult and may negatively impact your grade.

Your submitted homework will be evaluated and given a grade. The evaluation includes detailed feedback from the grader. Please be sure to read the comments provided to you in the evaluation, as they will help you understand your mistakes. Click on the question number in Gradescope to show the rubric items that were applied against that question, and view your submitted file in Gradescope to see additional comments provided by the grader. Students are encouraged to correct mistakes in their homework, so as to better learn the material. You should ask the professor or a CA for clarification about any past mistakes, if the reason for a point deduction is not clear to you.

If you feel that your assignment has been graded incorrectly, submit a regrade request on Gradescope. Be sure to submit your regrade request promptly, as regrade requests are typically accepted only within one week from the time that grades are published.

3.2 Programming environment

A substantial component of this class is programming work to be completed independently. You need to make sure that you are able to use the software tools necessary to accomplish this.

You should develop your programming assignments using tools as similar as possible to the environment under which they will be evaluated, to ensure that you don't lose points due to a difference in versions or different behaviors under different operating systems.

- A new service, Anubis, is available at <https://anubis-lms.io/playgrounds>. Logging into Anubis gives you access to a cloud-based text editor and a pre-configured Linux environment, which you can use to develop your assignments.

After logging in to Anubis, select the playground named “CompArch / PL”, then click Launch Session. When it’s ready, click Go to IDE. Be sure to click Stop Session when you are longer using it.

Please be aware that the Anubis service gets busy, especially around deadlines. Please plan accordingly. Anubis may crash or lose saved data: you are responsible for such cases, and therefore you should take steps to backup all your data to a secure location.

Your professor is not an administrator of Anubis and is not responsible for its upkeep. If you have technical problems with Anubis, please contact Anubis tech support. When contacting Anubis tech support, be sure to include the course number and a precise description of the problem.

- You may install Linux into a virtual machine running on your own computer. This has the advantage that you won’t need internet connectivity to use it, but on the other hand you are responsible for configuring the machine and installing the necessary software. Fortunately, most of the software you’ll need can be easily installed through the repositories.

Instructions for installing and configuring VirtualBox are provided on Brightspace.

- Windows supports the Windows Subsystem for Linux (WSL), which allows you to run a complete Ubuntu installation without a virtual machine.

There are several online tutorials for installing WSL. Here’s a good one.

- If you have Linux installed on your own computer, you may choose to develop software without the use of a virtual machine. Please make sure that you’re using the right version of any necessary software.

3.3 Poll Everywhere

We use Poll Everywhere as a student response system (SRS).

- To use it on your mobile device, download the app at <https://www.polleverywhere.com/mobile>.
- To use it from your web browser, go to <https://pollev.com/>.

In either case, you will need to enter your professor’s “presenter ID,” which is **ratandey**. When prompted, log in to the NYU SSO with your NYU NetID. You may be asked to confirm a registration for the NYU College of Nursing; that’s okay, just go with it.

You can consult the Poll Everywhere student guide for help.

4 Course Schedule

Tentative Schedules are as follows:

Week Number	Topics	Engagement	Notes
1	Syllabus, Logic Gates, Binary Arithmetics, Basic Linux Commands	Slides, Videos	Homework1 posted on Friday
2	Bitwise Operators, Adders, MUX, ALU, Combinatorial Verilog	Slides, Guides	Homework2 posted on Friday
3	Sequential Verilog, E15 processor	Slides, Manuals, Guides	Homework3 posted on Friday
4	E20 processor, E20 Assembly Language	Slides, Manuals, Guides	Homework4 posted on Friday
5	E20 Assembly Language Programming	Slides, Manuals, Guides	Homework5 posted on Friday
6	Hardware Implementation of E20 Processor, Review Midterm Exam Topics	Slides, Manuals	Homework5 due
7	Midterm Exam on October 16, 2025	Slides, Manuals, Guides	In Person paper and pen exam
8	Continue E20 Hardware g Implementation, Pipelining	Slides, Manuals	proj1 posted
9	Pipelining, Caching	Slides, Manuals	Homework6 posted on Friday
10	Continue Caching, Virtual Memory	Slides, Manuals	Homework7 posted on Friday
11	Continue Virtual Memory, Intel x86 Architecute	Slides, Guides, Manuals	Homework8 posted on Friday
12	Intel x86 Intructions Set	Slides, Guides, Manuals	proj2 posted
13	Intel x86 Assembly Language Programming, Linux System Calls,Input/Output	Slides, Guides, Manuals	Homework9 posted
14	GPU,CPU and GPU,	Slides, Manuals	
Final Exam Week	Final Exam	Exact date: TBA	

5 Additional policies

5.1 Class expectations

Attendance is in-person and mandatory, both for lectures and for recitations.

If you feel ill, do not come to class. Instead, report your symptoms to the NYU COVID-19 Prevention & Response Team and to Student Advocacy (previously known as Student Affairs). Staying home while sick prevents the spread of infections to other people and reduces the likelihood of additional absences or a class disruption. Excused absences due to illness or COVID-19 will not have any negative academic impact.

You are expected to take notes during lecture, based on our discussions and lectures. Please be prepared to do so.

Active participation in class discussions is strongly encouraged. This is the best time for students to ask questions or clarify any confusing concepts. In addition, you are responsible for any material covered in class, even if it isn't in the textbook. If you miss a class, you should contact a classmate to recover the missed content and assignments.

To participate in person, just raise your hand. To participate via Zoom, use the "raise hand" icon available on the Participants pane.

When attending in person, please disable or silence any device that may audibly disrupt the class.

Please bring your phone or computer to lecture, so that you can participate in Poll Everywhere. Make sure that you are logged in to the app during lecture.

During class time, please do not use your phone or computer for activities unrelated to class. Please do not eat or drink during class. Do not sleep in class.

Students are expected to arrive to every class promptly. You should be actively engaged in the learning process during the duration of the class time.

5.2 Communication

There are a few ways that your professor will communicate with you throughout the semester. You may receive communication and information directly from this syllabus, via email, during the class, or during office hours. Your professor may occasionally use email to make class announcements. It is your responsibility to check your NYU email account regularly. In addition, your professor will communicate through NYU Brightspace, using the Announcements. **Announcements** will be posted on NYU Brightspace to keep you up to date on all course activities and deadlines. You can locate all class announcements under the Announcements tab of our class. It is your responsibility to check the class announcements regularly as they will contain important information about class assignments and other class matters.

Assignments will typically be posted on NYU Brightspace. It is your responsibility to check NYU Brightspace for assignments, and to submit your work in a timely manner.

5.3 Office hours

All office hours are held on Zoom.

- CA office hours are scheduled at a regular time each week. You can find the schedule at the beginning of the syllabus. Connect through the Zoom tab on Brightspace.
- Professor office hours are made by appointment. Please email your professor to set up a time.

Note that office hours are often busy, especially just before a major deadline. Please plan accordingly.

5.4 Late policy and make-up policy

All assignments should be submitted before the due date. Homework and projects may be submitted without penalty up to 24 hours after the due date. After that time, absolutely no submissions will be accepted without prior agreement.

In general, late assignments (except as indicated above) will not be accepted, and substitute exams will not be offered.

Consideration may be given in case of a documented special circumstance, such as a medical condition or a family emergency, in accordance with university policy. If that case applies to you and you need additional time to complete an assignment or need a rescheduled exam, please follow this procedure:

1. The process of requesting an extended date for an assignment or exam must be begun as soon as possible: that is, as soon as you are aware of the extenuating circumstance. A request received after the original deadline is usually not acceptable.
2. Your first point of contact should be Tandon's Student Advocacy (previously known as Student Affairs) office. Send them written documentation of your special circumstance. On the basis of your documentation, they may recommend an accommodation to your professor.
3. Then, contact your professor, forwarding the response from Student Life & Services. Based on the recommendation from Student Life & Services, your professor may offer you an alternative date for the assignment or exam. If you agree to the alternative date, state your agreement in writing to your professor.

4. Complete the assignment or exam by the agreed-upon date and submit it by the agreed-upon method. No further extensions or grace periods will be possible after that time.

You will receive credit only with an approved excuse from Student Life & Services, *and* an agreement negotiated in advance with your professor.

5.5 Special pleading

A principle of fairness in evaluation is that all students receive the same opportunity to complete the same assignments. Therefore, it would be unethical to offer some students additional opportunities, when those opportunities are not made available to everyone. Therefore:

- Your professor will not offer a student an extra credit assignment, if that assignment is not offered to the whole class.
- Your professor will not offer a student the chance to repeat or revise an assignment, when such an opportunity is not offered to the whole class.
- Your professor will not offer a student the chance to submit an assignment beyond the scheduled deadline and grace period, except in cases supported by Student Life & Services, as described above in the section discussing the late policy.

Please do not ask for such unfair opportunities.

5.6 Academic integrity

This class is bound by the Student Code of Conduct. We aim to ensure that your grade reflects your understanding of the material, and therefore we require that the work that you submit for grading be a result of your own effort. This applies to homework, projects, and exams for this class. This policy does *not* apply to recitation work, which is the only case where collaboration among students is encouraged.

Motivation Why do we take academic integrity seriously?

- If the work that you submit does not represent your own effort and understanding, you are doing yourself a grave disservice, by cheating yourself out of an opportunity to learn. Your grade has value only if it accurately represents what you've accomplished to get it. In the end, your diploma (should you achieve it) is worthless unless it is supported by personal growth and knowledge.
- Furthermore, by submitting work that does not represent your own effort and understanding, you are behaving dishonestly to the class's teaching staff. The professor and the CAs who work hard to create assignments, provide instruction, and evaluate students' work, do so in order to provide learning. Students who submit others' work as their own are therefore wasting the time of the teaching staff.
- Finally, misrepresenting yourself in your submitted work does real damage to your classmates. If you achieve a grade through dishonest work, students who complete the assignments honestly are at a disadvantage.

Policy We realize that it's not always clear what activities are acceptable in the context of working on your assignments. This is especially true in Computer Science, where the web can provide excellent learning resources (good!) as well as solutions to assignments (bad!). To help you understand the boundaries of what is and is not acceptable, we provide the following guidelines, which are based on the Stanford CS107 collaboration rules. We classify activities into three categories, according to a traffic light model: those activities that are always acceptable (**green light**), those that are acceptable but require a citation (**yellow light**), and those that are not acceptable (**red light**).

- These activities are always acceptable:

- **Green light Discussion of general course topics.**

You may freely discuss the course material, outside of the context of a specific assignment. This means you can ask and answer questions about the rules of the programming languages and tools that we use, as well as theoretical matters that were covered in lecture or in the textbook. However, the discussion may not refer to solutions for a specific assignment.

For example: “What does the `elem` function do? What is the syntax for a function definition?”

- **Green light Discussion of assignment requirements.**

You may freely discuss the requirements for a specific assignment. However, the discussion may not refer to solutions.

For example: “Are we allowed to use `reverse`? Is performance important?”

- **Green light Use of public resources for background information.**

Web sites, books, and other public resources provide lots of great information. You are expected and encouraged to refer to documentation for the languages and tools that we use, as long as they don’t refer to the specific task for your assignment.

For example, the official Python documentation is okay, but “How to write Space Invaders in Python” is not okay (assuming the assignment is Space Invaders).

- **Green light Discussion with teaching staff.**

This is the best way to get help! You can always turn to your professor and CAs with any questions. You can ask questions about any assignment during class, during office hours, or by email.

- These activities are acceptable but require a citation:

- **Yellow light Re-using your own work.**

If you are submitting your own work, including code, that you originally completed before you took this class, you must provide a note stating this fact, including when you originally did the work and under what conditions.

If you want to submit work that you have previously completed for an earlier instance of this class, or for any other class, you must discuss the matter with your professor before proceeding. In general, you are not allowed to re-submit work completed in an earlier semester.

An exception to this rule applies if you have previously committed plagiarism in this class. In that case, you are prohibited from re-submitting any plagiarized work or any work based on that work. Submitting an assignment that is based on plagiarized work is considered a new case of plagiarism.

- **Yellow light Discussion of testing.**

If you aren’t sure if your solution is correct, it can be helpful to develop a strategy to test it. You may propose and discuss tests collaboratively, as long as you provide a note describing the incident. For example, you may remind a friend that a particular function needs to work with empty lists. However, you may not see each other’s code or discuss it in detail.

- **Yellow light Discussion of debugging.**

You may discuss particular error messages and propose possible solutions, as long as you provide a note describing the incident. For example, if a friend says they are getting a “segmentation fault,” you may suggest that they might be dereferencing a null pointer. However, you may not see each other’s code or discuss it in detail.

What is a citation? If you participate in one of the activities in this section, you must state so in the assignment that it pertains to. If the assignment is a coding exercise, you must write a comment

in your code describing the activity. If the assignment is non-code work, you must write a preface describing the activity.

Every citation must describe (a) the specific source of the information that you used (a person, a book, or a web site), and (b) how you used that information, and to what extent it influenced your work. Failing to provide a citation when participating in one of these activities renders the activity unacceptable, and therefore a violation of academic integrity.

- These activities are never acceptable, and always constitute a violation of academic integrity:
 - **Red light Copying code or answers from others.**
The work you submit must be written entirely by you. This means not only that you physically wrote it, but that the ideas behind it are yours. You may not copy code, read code, or consult code from another person, directly or indirectly. If you are in an environment where you are able to see another person's solution, it is your responsibility to take yourself out of that environment and actively prevent the possibility of being influenced by their work.
 - **Red light Collaborative development.**
You may not work together with another person, and your submitted solution must not be influenced by anyone else's input. Any sharing of technique, design, pseudocode, structure, or substance, even in partial or incomplete form, is not acceptable. Solving bugs collaboratively is prohibited. You must work on your assignments alone, from beginning to end.
 - **Red light Using public resources for assignment-specific code.**
Web sites, books, and other public resources can provide valuable information, but any resource that refers to the task that you are to complete for the assignment, or to a task that is substantially similar to it, is not allowed. The design and implementation of your solution may not be influenced or inspired by an external resource. Taking code, in any quantity, from a web site is prohibited. If you find yourself reading a web site that addresses the design or implementation of a program similar to the task at hand, you are required to stop using it.
The boundary between "general background resources" and "assignment-specific resources" may be fuzzy. If you have any doubt that a resource you are using is acceptable, ask your professor first.
 - **Red light Allowing others to use your code or answers.**
At no point should anyone else have access to your work. This means that you may not keep your work on a shared or public computer. You may not post your work on a public web site (including Github and similar sites). You may not show your work to others, even if they promise not to use it in their own work. Your work should remain private, and if at any time it isn't, then you have contributed to academic dishonesty.
You may use Github (and similar sites) as version control storage, but it is your responsibility to ensure that your repository is private. If your code is publicly visible at any time, it constitutes a violation of this policy.
The prohibition on sharing your work remains in effect even after you have submitted your work, after the due date has passed, and after the course has ended. Be aware that other students may attempt to submit your work as their own without your knowledge. Students in future semesters should not have access to your work.
 - **Red light Developing code or solutions with the help of artificial intelligence.**
Systems such as Github Copilot and ChatGPT are trained on input data from various sources. As a result, if you use these systems, your program or solution will include elements that you did not write. Therefore, using these or any similar system is prohibited.

If you are in doubt about whether a particular activity is acceptable, it's best to consult with your professor *before* doing it.

If you are struggling in the class, please discuss your situation with your professor. Plagiarism is not a solution.

Violations of academic integrity will be dealt with strictly. Typically, this means receiving a failing grade for the course and a referral to Student Life & Services (previously known as Student Affairs).

Preventing plagiarism is everyone's responsibility. If you become aware of plagiarism, even if you are not directly involved in it, you are obligated to report it to your professor.

If you have committed plagiarism, your first step should be to reach out to your professor so we can work together to find a way for you to move forward with integrity. A timely request to retract a compromised work or apply an amended citation that properly credits authorship could rectify the misrepresentation that would have otherwise been the basis for a strict punishment.

Examples Here are some real-world examples of plagiarism, and their outcomes:

- Alice submits a homework before the deadline. Then, after the deadline, Bob asks to see Alice's solution, allegedly just for reference. Since the deadline has already elapsed, Alice obliges. Unbeknown to Alice, Bob has received, for medical reasons, a deadline extension. Bob then submits Alice's solution as his own. Consequence: both students fail.
- Cathy and Dave are roommates. In their apartment, they share a computer, which they can both log in to. Dave uses the computer to submit his homework. Later, Cathy finds Dave's homework on the computer, and uses it to complete her own homework. Consequence: both students fail.
- Emil is an experienced programmer who uses Github to store his assignments as part of his programming portfolio. His homework assignment is stored to a public repository, where Felicity finds it with a Google search. Felicity then downloads his homework and submits it as her own. Consequence: both students fail.
- Greta and Harry complete their homework together to save time. Greta does the odd-numbered questions, and Harry does the even-numbered questions, then they combine them. Consequence: both students fail.

5.7 Inclusivity statement

NYU is committed to creating an inclusive and equitable environment for all students. In this class, I aim to cultivate a strong sense of community, emphasizing that it is a space where individuals of diverse backgrounds—spanning beliefs, ethnicities, national origins, gender identities, sexual orientations, religious and political affiliations, and abilities—are treated with respect. All members of the class are expected to contribute to a respectful and inclusive atmosphere for each other. While disagreement and differing ideas are welcome, the expectation is that we respect perspectives beyond our own, even when they diverge from our personal beliefs or experiences. If you encounter disrespect or discrimination in the class or feel that the outlined standards are not being upheld, please report your experiences to me.

5.8 The Office of Student Advocacy

At NYU Tandon, we recognize that medical, mental health, or personal issues can sometimes affect your attendance and academic performance. If you are experiencing challenges that you feel are impacting your ability to attend class or succeed in your coursework, we encourage you to reach out to the NYU Tandon Office of Student Advocacy. The Student Advocacy team is here to connect you with the resources and support you need to address these challenges and ensure you can continue to thrive academically. If you begin experiencing any issues that may affect your attendance or academic performance, please reach out to the NYU Tandon Office of Student Advocacy as soon as possible as we will be unable to appropriately address these concerns as the semester progresses, so early communication is essential to ensure the support and resources you need. The NYU Tandon Office of Student Advocacy can be reached at advocacy.tandonstudentlife@nyu.edu and is located in 5 MetroTech Center LC240.

5.9 Religious holiday observance

The instructor supports NYU's policy with regard to absence due to religious holidays. If you have a conflict due to observance of a religious holiday, please alert the instructor in advance so that a plan for makeup can be arranged.

5.10 Academic accommodations

New York University provides reasonable accommodations to qualified students who disclose their disability to the Moses Center. Reasonable accommodations are adjustments to policy, practice, and programs that level the playing field for students with disabilities and provide equal access to NYU's programs and activities. Accommodations and other related services are determined on a case-by-case basis, taking into consideration each student's disability-related needs and NYU program requirements.

If you are student with a disability who is requesting accommodations, please contact New York University's Moses Center for Students with Disabilities at 212-998-4980 or mosescsd@nyu.edu. You must be registered with CSD to receive accommodations. Information about the Moses Center can be found at <http://www.nyu.edu/csd>. The Moses Center is located at 726 Broadway on the 2nd floor.

If you are authorized to receive accommodation for an exam, it is your responsibility to schedule the exam with the Moses Center in advance. To receive other types of accommodation, please discuss with your professor in advance.

5.11 ABET learning goals

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies
